Education

Birla Institute of Technology and Science, Pilani — Pilani, India
Bachelor of Science in Computer Science — *Aug 2024 – Aug 2027*

City Montessori School — Lucknow, India
Class XII — *Apr 2009 – Apr 2024*

Portfolio

Playable Portfolio Website | *React, Phaser 4, Vite, Tailwind CSS* | Visit · Code — May 2026

- Built a portfolio whose homepage is a playable pixel-art platformer; bumping question blocks opens each page.
- Bridged Phaser and React Router with an event bus, keeping one persistent game that pauses while hidden.
- Drew pixel-art textures in code, synthesized sound with the Web Audio API, and scaled the level to any window.

Projects

Monsters Inc. (#43 of 207 overall) | *Unity, C#, WebGL, Game Jam* | Play · Results — Sep 2026

- Crossed block-pushing puzzles with tower defense: crush monsters with blocks or power outlets that zap them.
- Designed 10 rooms with one exact solution each; monsters path around blocks, or chew through when boxed in.
- Showed each room's full monster schedule up front, with unlimited undo, so players plan rather than guess.
- Ranked #43 of 207 overall (top 21%) and #25 in Scope & Completion at Bezi Mega Jam 2026; made solo.

Griddle | *Unity 6, C#, .NET, WebGL* | Play · Code — Sep 2026

- Built a clue-less crossword where players guess words Wordle-style and each solve reveals crossing letters; ships with a 20-level campaign, date-seeded daily puzzles with streaks, and an endless mode.
- Wrote a procedural level generator that lays out interlocking grids, mines provably true hint rules from each word set, and estimates par with a solver bot that plays through the real game logic.
- Added a fairness audit that simulates solve orders so crossing letters never give away an unguessed word.
- Kept the game core in pure C# with no Unity dependencies and covered it with 150+ automated test checks.

PongPing (#120 of 517 in Enjoyment) | *Unity, C#, WebGL, Game Jam* | Play · Code — Mar 2026

- Built a reverse-Pong game where the player steers the ball and keeps hitting AI paddles that shrink on each hit.
- Wrote paddle AI with randomized patrols that eases off near the ball, plus hit-position-based bounce angles.
- Ramped ball speed over time with a cyan-to-red speed trail; added 3 difficulty presets and a saved high score.
- Ranked #120 in Enjoyment (top 24%) and #228 overall of 517 ranked entries at Bad Ideas Game Jam 2026.

FallingBlocks | *Unity, C#, WebGL* | Play · Code — Feb 2026

- Built a 2D survival game where the player dodges blocks spawned with random position, size, speed, and rotation.
- Ramped spawn rate and fall speed over 60 seconds, and built an event-driven (C# Action) game-over flow.

SphereRunner | *Unity, C#, 3D Physics* | Code — Aug 2025

- Built a physics-driven obstacle runner across 3 levels and an endless mode, moved entirely by Rigidbody forces.
- Scripted moving walls, trigger-spawned road sections, a follow camera, and distance-based scoring.

Experience

Business Development Intern — Nov 2025 – Jan 2026
VeritusAI — *Osaka, Japan — Remote*

- Led cold email and direct-message outreach campaigns to IIT professors and academic researchers.
- Identified and qualified prospects, tailoring each message to the researcher's field to explain product value.
- Ran follow-ups and guided interested researchers through onboarding to drive early adoption.

Beta Tester — Sep 2025
Subatomic Forge Studios

- Playtested pre-release builds of *The Space Between*, reporting bugs, usability issues, and balancing feedback.
- Worked with the studio to improve the player experience; named in the game's credits.

Technical Skills

Languages: C#, Java, JavaScript, Python, SQL (MySQL), HTML/CSS
Engines & Frameworks: Unity, Phaser, Unreal Engine, GDevelop, React, Spring Boot, Tailwind CSS
Game Development: Gameplay Programming, Procedural Generation, Game AI, Physics & Collision, Level Design
Developer Tools: Git, GitHub, VS Code, .NET CLI, Vite, Vercel, GitHub Pages, itch.io, Canva
